

this is *where* you LASIK.™

You'll love LASIK. *It makes life easier.*

Let's be honest, nobody likes dealing with contacts or glasses day in and day out. They get itchy and scratchy, broken and misplaced. Talk about annoying.

Now just imagine if you could rid yourself of all those daily annoyances in as little as 15 minutes. With LASIK, you can. LASIK (Laser-Assisted In Situ Keratomileusis) is the most common elective vision procedure in the U.S., and one of the most popular forms of elective surgery in America.

For most patients with myopia (nearsightedness), hyperopia (farsightedness), or astigmatism, LASIK provides a permanent alternative to glasses or contacts. The procedure usually takes less than 15 minutes and recovery time is typically very rapid, often resulting in 20/20 vision or better.

Good news! *LASIK is probably right.*

If you're the type of person who hates sticking your finger in your eye or having to constantly de-smudge your lenses, there's a good chance LASIK is meant for you.

While there are some conditions that exclude certain patients, LASIK is a great option for the majority of people who meet the age and general health requirements. If we discover during your personal consultation that LASIK isn't right for you, don't sweat it.

We have plenty of alternative options, like PRK, ICLs and Lens Replacement procedures. We invite you to contact nJoy Vision to schedule a free consultation to see if LASIK is right for you.

iLASIK with iDESIGN®. *It's the only way to LASIK.*

With the iDESIGN® Refractive Studio from Johnson & Johnson Vision, the next generation of personalized iLASIK treatment is available at nJoy Vision.

This exciting LASIK technology is the first and only system to use topography-integrated, wavefront-guided technology to take over 1,200 eye measurements for a truly customized LASIK experience that is 25 times more precise than conventional measurements. Combining the iFS® Advanced Femtosecond Laser with the STAR S4 IR® Excimer Laser, the iDESIGN® System allows nJoy Vision to serve more patients than ever before as it has received FDA approval to treat people with myopia, hyperopia, mixed astigmatism, and for monovision in presbyopic myopic patients.

And not only do our physicians know how to handle their lasers, they know how to handle patients too. Our patient-first mindset ensures we're looking out for your best interests at every turn, not just the few minutes you're in the surgery suite.

All-Laser LASIK. *Advantage to you.*

If you follow our logic that a procedure with the word laser in it is better than a procedure without the word laser in it, then you understand the significance of an All-Laser LASIK procedure at nJoy Vision.

Our iLASIK platform is backed by more than a decade of technological advancement and refinement. It brings all the latest, most advanced all-laser LASIK technology together into one super LASIK procedure. In fact, it's the same technology used by the U.S. Navy and NASA.

The iLASIK procedure uses wavefront technology to create a 3-D image of the eye and its imperfections. This advanced image then guides the laser to ensure a precise, custom treatment is performed each and every time.

LASIK & PRK FAQs

nJoyVision.com // (405) 842-6060

How do I know if I am a candidate for LASIK or PRK eye surgery?

The decision to have laser vision correction treatment depends on the results of a thorough preoperative evaluation. Every patient is unique and so are your eyes – each eye requires a careful examination with the most advanced technology. Most patients who are mildly to moderately near-sighted and mildly farsighted with or without astigmatism qualify. Other vision treatment options are offered for patients who are ineligible for LASIK. A free consultation is available to determine whether or not you are a candidate for laser vision correction.

How long do I have to keep my contact lenses out?

Prior to your consultation and surgery, soft contact lenses should be removed for 2 weeks, soft contact lenses that correct for astigmatism or rigid gas permeable lenses will need to be out longer. An initial screening can be performed prior to discontinuing contact lens wear. Your doctor will determine the specific length of time required to remove your contact lenses.

What is the difference between LASIK and PRK?

The LASIK procedure involves creating a flap and reshaping the cornea beneath the flap. The PRK procedure directly reshapes the cornea on the surface of the eye without the creation of a flap.

How long does the LASIK or PRK eye surgery procedure take?

The procedure typically takes 5-10 minutes per eye, with the actual laser treatment time lasting less than one minute per eye. Patients are usually in the surgery suite for no more than 15 minutes and at our facility for an average of 1.5 to 2 hours. Patients need to have someone drive them home following their procedure.

Is there any pain involved with LASIK or PRK eye surgery?

Prior to treatment, anesthetic drops are used to numb the eyes to keep you comfortable during the procedure. LASIK patients will feel a mild pressure sensation, but should not experience pain. After PRK, there can be slightly more discomfort, but an oral pain medication and a special contact lens will aid in your comfort. Your doctor will also prescribe post-operative medications and lubricating drops to prevent infection and keep you as comfortable as possible as you heal.

LASIK & PRK FAQs */continued*

How much time do I need to take off from work?

Following LASIK, doctors recommend taking off the day after your surgery. Occasionally it will be recommended that more time is taken – but that is usually only when you work in a high-risk environment. Some patients are comfortable and released to return to work the next day. Following PRK, the healing process is longer and you should plan on 3-5 days of recovery time. It is important that there is not a great risk of exposure to infection or injury in the days following LASIK or PRK.

Are laser vision correction procedures covered by insurance?

LASIK and PRK are considered elective procedures. Most insurance companies do not provide coverage. However, some vision plans do offer a discounted benefit on LASIK. We accept all major credit cards and offer flexible financing options. If you have a health savings account (HSA) or flexible spending account (FSA) you may be able to pay for laser vision correction treatment with pre-tax dollars.

EVO ICL™: Seeing clearly without glasses or contacts

EVO ICL™ promises freedom. *Zoom in on the details.*

Quite literally! This lens implant helps you restore your distance vision.

The EVO ICL™, also known as the Implantable Collamer® Lens, is a microscopically thin, soft lens implanted in the eye to permanently correct mild or severe nearsightedness and astigmatism. Simply put, it's a removable lens implant that is an attractive alternative to LASIK and other refractive procedures. To date more than 1,000,000 EVO ICL™ have been implanted in patients worldwide. Are you ready to join the club?

Quick Procedure & Recovery. *EVO ICL™ is growing in popularity.*

Elite athletes, celebrities, and military personnel have chosen the EVO ICL™. It's easy to see why.

Patient outcomes have been excellent, and the EVO ICL™ procedure has been refined down to a quick and comfortable process. Most procedures are completed within 20-30 minutes or less. With a minimally invasive procedure, many achieve improved vision nearly immediately.

EVO ICL™ & You. *The visual freedom you deserve.*

If you are ready to break free from glasses or contact lenses but are not a good candidate for LASIK, the EVO ICL™ may be right for you.

That's why we're excited to offer the EVO ICL™ at our centers. As always, our goal is to provide patients with access to excellent care and positive results. We understand that your decision to undergo any surgical procedure requires careful consideration and planning. nJoy Vision offers you support every step of the way: before, during and after the procedure. That's patient care FOCUSED on you.

EVO ICL™ patients prefer a flexible and biocompatible vision correction option that doesn't permanently change the shape of your cornea and can be removed if necessary. You could be an EVO ICL™ candidate if you are:

- + Between the ages of 21 and 45
- + Seeking treatment for nearsightedness (with or without astigmatism)
- + Stable in your current prescription for at least one year
- + Not currently pregnant or nursing

EVO ICL™ & Implants FAQs

nJoyVision.com // (405) 842-6060

What is the EVO ICL™ Lens?

EVO ICL™ is an Implantable Collamer™ Lens that corrects common vision problems such as nearsightedness (myopia) and astigmatism. Collamer is a biocompatible material that works in harmony with the eye. The lens, which is slightly smaller than a typical contact lens, is implanted in the eye during a 20 to 30 minute procedure. Unlike laser vision correction surgeries that permanently change the shape of your cornea, the EVO ICL™ procedure is additive, meaning that no corneal tissue is removed. Worldwide, more than 1 million EVO ICL™ lenses have been implanted.

What are the Benefits of EVO ICL™?

EVO ICL™ offers many benefits for patients who are candidates for the ICL procedure and are seeking a vision solution that allows them the freedom of less dependence on glasses or contact lenses. The advantages of EVO ICL™ include:

- + Sharp, clear vision
- + Excellent night vision
- + Does not cause dry eye syndrome
- + Quick procedure and recovery
- + No removal of corneal tissue
- + Removable by your doctor
- + Protection from UV rays

Who is a Candidate for Vision Correction with EVO ICL™?

People who want a flexible and biocompatible vision correction option, as well as many patients who are not candidates for laser vision correction, find that Visian EVO ICL is the right procedure for them.

Ideal candidates for EVO ICL™:

- + Are between the ages of 21 and 45
- + Are seeking a vision correction solution for moderate to severe nearsightedness (with or without astigmatism)
- + Have a stable prescription that has not changed within the last year
- + Have good ocular health with no history of glaucoma, iritis, or diabetic eye disease

EVO ICL™ & Implants FAQs */continued*

Who is NOT a candidate for EVO ICL™?

At nJoy Vision, we always recommend you undergo a vision consultation to determine the best vision correction plan for you. If the EVO ICL™ is not right for you, other options are available.

How is the EVO ICL™ Lens Procedure Performed?

Vision correction with the EVO ICL™ is an outpatient procedure that typically takes 20 to 30 minutes. After an initial exam with nJoy Vision physicians to determine that the EVO ICL is right for you, you will schedule your procedure. On the day of the procedure, your eyes will be numbed with an anesthetic eye drop and your refractive surgeon will implant the ICL between the iris (colored part of the eye) and the natural lens. Your surgeon will likely schedule a follow-up appointment the same day as the procedure.

Can the EVO ICL™ Lens be Removed?

Yes, the EVO ICL™ is intended to provide permanent vision correction, but it can be removed or replaced by your surgeon.

Will I be able to feel the EVO ICL™ Lens?

No, patients should not feel the lens as it does not adhere to any structures within the eye and does not move once in place.

Will other people be able to see the EVO ICL™ Lens?

No, the EVO ICL™ lens is placed behind your iris where only your eye doctor will be able to detect it.

Are there any risks with the EVO ICL™ Procedure?

Any medical procedure has certain risks associated with it. Potential complications of the EVO ICL™ procedure, although rare, include inflammation, an increase in eye pressure, or the need for an additional procedure, like an ICL exchange. While these potential risks are mitigated as much as possible, they can all typically be addressed early and without long-term side effects.

Refractive Surgery Pricing

nJoyVision.com // (405) 842-6060

Custom All-Laser LASIK

All-Laser, blade-free LASIK procedures are performed with state-of-the-art, FDA-approved excimer and femtosecond (computer-guided) lasers for precise, all-laser treatment.

\$2,495 per eye

- + Includes 6 months post-operative visits
- + Includes enhancement procedures for 1 year at no charge
- + Includes facility fees

Custom PRK

PRK is an alternative to LASIK, which uses the same highly sophisticated excimer laser to reshape the surface of the cornea.

EVO ICL™

EVO ICLs™, or Implantable Collamer Lenses (also known as phakic IOLs) are alternative treatment options to LASIK or PRK eye surgery for correcting moderate to severe myopia (nearsightedness).

STANDARD

\$3,795 per eye

ASTIGMATISM

\$4,295 per eye

- + Includes 6 months post-operative visits
- + Includes lens implant
- + Includes enhancement procedures for 1 year at no charge
- + Includes facility fees

Lens Replacement

Utilizing advance diagnostic testing, Lens Replacement surgery involves replacing the natural crystalline lens with an artificial intraocular lens. Femtosecond laser technology, corneal relaxing incisions, specialized intraocular lens designs, and/or laser enhancement technology will be used to correct for nearsightedness, farsightedness, astigmatism, and presbyopia to reduce dependency on glasses or contact lenses at all distances.

\$7,352 per eye

- + Includes enhancement procedures for 1 year at no charge

Pricing effective 01/01/2020. Pricing subject to change without notice.
